

# Elevate your espresso experience.

Launch of new Swiss-made spring lever espresso machine.

– Stuttgart, October 1st, 2019

The future of new wave coffee technology has arrived in the iconic shape of the Manument Leva Machine. A striking new espresso machine, delivering sustainable innovation through precision engineering and the highest quality materials. Designed and handmade in Thun, Switzerland, the small but dedicated team at German owned Manument has put all its energy into creating this, their first product a Leva Machine that expertly crafts the best Espresso experience while connecting to the heart of progressive coffee culture.

Thomas Liebe, Designer of the Manument Leva Machine and Swiss Barista Champion 2008, said: “By creating a beautiful, analog mechanism that places full, expert control in the hands of the user we have solved many of the problems present in outdated espresso machines, such as temperature fluctuations, low comfort, long heating times and unchangeable flow profiles”.

The innovative manual flow lever means water flow to the ground coffee can be manually calibrated in real time to influence the desired flavour in the cup. A multi-flow heater system (patent pending) heats only the exact amount of water necessary for a double shot or milk frothing, thus preventing overheating and guaranteeing minimal waste heat while keeping the set temperature espresso extraction.

CEO, Francesca Schulz said “Inspired by the traditional Italian lever machine, deconstructed by coffee experts, designed from a clean slate, and handmade to the highest standards of Swiss engineering, the Manument Leva Machine is the ultimate in new wave coffee technology. After 18 months of development work, we have achieved our goal – to provide a sustainable, beautiful machine of

the absolute highest quality for use by professional baristi and coffee enthusiasts in the comfort of your own home“.

The Manument Leva Machine consists of 590 high-performance parts, it offers an unprecedented level of control while setting a new standard for sustainable innovation.

## ABOUT MANUMENT

Established in 2018, Manument is made up of a small but dedicated team of Baristi, designers, engineers and above all espresso lovers. With headquarters in Stuttgart, the German start-up is led by CEO Francesca Schulz. Born out of dedication, a love of experimentation and the demand for really good espresso, Manument are launching their brand with the iconic Leva Machine, a striking new espresso machine, delivering sustainable innovation through precision engineering and the highest quality materials.
